

General product features

- Plug and play multimedia interface
- Optional control of after-market devices, e.g. DVB-T-tuner, DVD-player, DVD-changer, ...
- 1 AV-input with IR-channel for device control
- Rear-view camera-input
- Automatic switching to rear-view camera-input when reverse gear is engaged (limitations on some models, see below table)
- Power output (+12V max 1A) for connected devices
- Rear-view camera power (+12V max 1A)

Compatibility and model specific product features

Do not forget to order the matching IR-control cable STA-xxx for every controlled extern device!

** For some vehicle models coding is not possible (for example MB Sprinter, Skoda Columbus mit SW Version A)

Key

factory TV: Whether the interface can work in combination with the factory TV-tuner. NO means that an existing factory tuner must be uninstalled prior to interface installation.
 available RVC codes: Which devices can be controlled through the factory navigation when the interface is installed. Interfaces with database have pre-programmed the whole IR-act and it is possible to choose any device during the operation.
 VIM incl.: Whether video-in-motion is included for the AV-sources that are connected to the interface. NO means that an extra video-in-motion interface is required if video-in-motion is desired.
 RVC-in: **VIM is implemented automatically due to technical reasons.
 RVC auto-switch: Whether the interface has an additional video-input for rear-view camera.
 RVC auto-switch OEM: Whether factory-infantainment switches from OEM-models (navigation, radio, CD, ...) automatically to rear-view camera picture when the reverse gear is engaged. (Interface always switches to rear-view camera picture from interface mode when gear.)
